

Overview / Technical Data

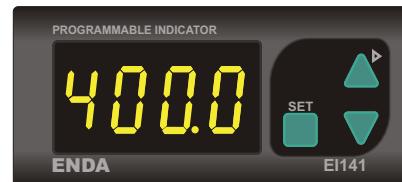

Read this document carefully before using this device. The guarantee will be expired by damaging of the device if you don't attend to the directions in the user manual. Also we don't accept any compensations for personal injury, material damage or capital disadvantages.

ENDA EI141 PROGRAMMABLE INDICATOR

Thank you for choosing ENDA EI141 INDICATOR.

- * 35x77mm sized.
- * 4 digits display.
- * Easy to use by front panel keypad.
- * Display scale can be adjusted between -1999 and 4000.
- * Decimal point can be adjusted between 1. ile 3. digits.
- * Measurement unit can be displayed.
- * Selectable four different standard input types (0-20mA, 4-20mA, 0-1V, 0-10V)
- * User can calibrate the device according to his/her own specified input type.
- * Sampling time can be adjusted in four steps.
- * Maximum and minimum measurement values are registered.
- * The maximum or the minimum values can be hold on the display.
- * Current and voltage calibration can be made..
- * Parameter access protection on 3 levels.
- * Easy connection by removable screw terminal.

RoHS Compliant

Order Code : EI141-

1

1 - Supply Voltage

230VAC...230V AC
24VAC.....24V AC
SM.....9-30V DC / 7-24V AC

TECHNICAL SPECIFICATIONS

ENVIRONMENTAL CONDITIONS

| | |
|-----------------------------|---|
| Ambient/storage temperature | 0 ... +50°C/-25 ... +70°C (with no icing) |
| Max. relative humidity | 80% up to 31°C decreasing linearly 50% at 40°C. |
| Rated pollution degree | According to EN 60529 |
| | Front panel : IP65 Rare panel : IP20 |
| Height | Max. 2000m |

Do not use the device in locations subject to corrosive and flammable gases.

ELECTRICAL CHARACTERISTICS

| | | | |
|---------------------|---|--|--|
| Supply | 230VAC +10%/-20%, 50/60Hz, 24VAC±10%,50/60Hz or 24Vac/dc (9-30Vdc or 7-24Vac) | | |
| Power consumption | Max. 7VA | | |
| Wiring | 2.5mm ² screw-terminal connections | | |
| Date retention | EEPROM (Min. 10 years) | | |
| EMC | EN 61326-1: 1997, A1: 1998, A2: 2001 (Performance criterion B for the EMC standard) | | |
| Safety requirements | EN 61010-1: 2001 (pollution degree 2, overvoltage category II, measurement category I) EI141 must not be used in location where measurement category is II, III or IV. | | |

| Input type | Measurement range | Measurement accuracy | Input impedance |
|-------------------|-------------------|----------------------|-----------------------|
| | Min. | Max. | |
| 0-1V DC voltage | 0V | 1.1V | ±0,5% (of full scale) |
| 0-10V DC voltage | 0V | 14V | ±0,5% (of full scale) |
| 0-20mA DC current | 0mA | 25mA | ±0,5% (of full scale) |
| 4-20mA DC current | 0mA | 25mA | ±0,5% (of full scale) |

In the current measurement mode input impedance is 5Ω. Therefore, in the current measurement mode, any voltage input should not be connected to the input terminals. Otherwise, the device will be broken down. To change the input type from voltage to a current measurement mode while the device is operating, first, leave out the voltage inputs. Then, change input type to one of the current measurement modes.

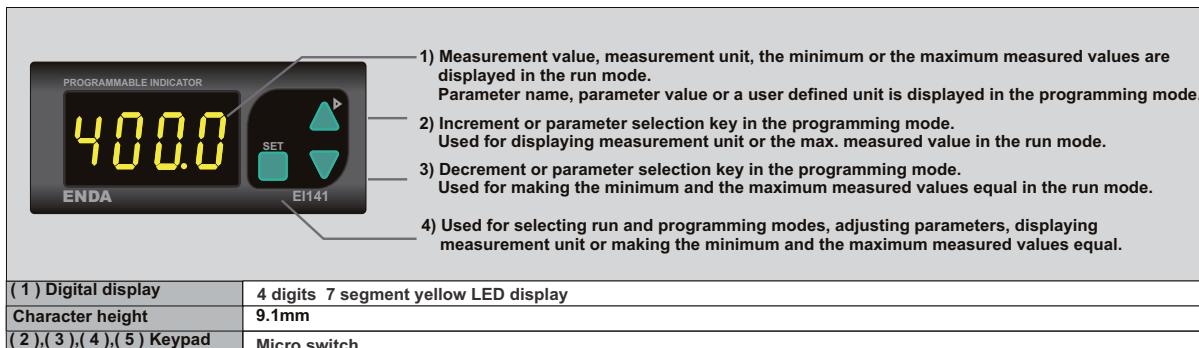

HOUSING

| | | | |
|--------------------|--|--|--|
| Housing type | Suitable for flush-panel mounting according to DIN 43 700. | | |
| Dimensions | W77xH35xD71mm | | |
| Weight | Approx. 250g (after packing) | | |
| Enclosure material | Self extinguishing plastics | | |

While cleaning the device, solvents (thinner, benzine, acid etc.) or corrosive materials must not be used.

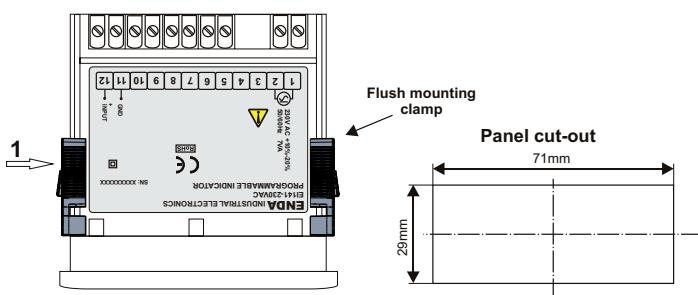

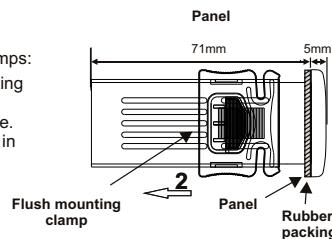

Technical Data

DIMENSIONS

For removing mounting clamps:
 - Push up the flush-mounting clamp in direction 1 as shown in the figure above.
 - Then, pull out the clamp in direction 2.

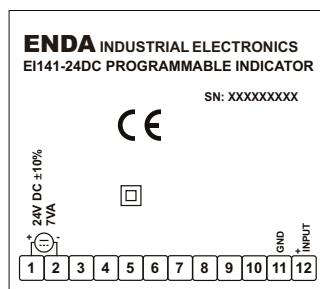

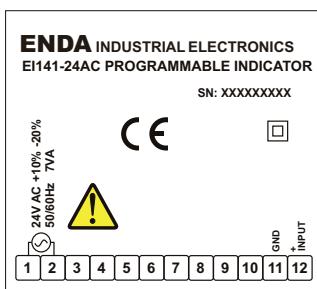

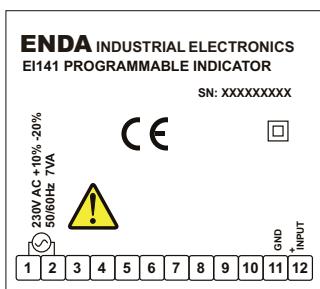

Note : 1) Panel thickness should be maximum 7 mm.
 2) If there is no 60mm free space at the back side of the device, it would be difficult to remove it from the panel.

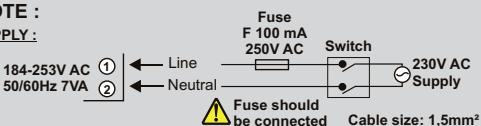

CONNECTION DIAGRAM

ENDA EI141 is intended for installation in control panels. Make sure that the device is used only for intended purpose. The shielding must be grounded on the instrument side. During an installation, all of the cables that are connected to the device must be free of energy. The device must be protected against inadmissible humidity, vibrations, severe soiling and make sure that the operation temperature is not exceeded. All input and output lines that are not connected to the supply network must be laid out as shielded and twisted cables. These cables should not be close to the power cables or components. The installation and electrical connections must be carried on by a qualified staff and must be according to the relevant locally applicable regulations.

NOTE : SUPPLY :

Holding screw
 0.4-0.5Nm

Equipment is protected throughout by DOUBLE INSULATION.

Note : 1) Mains supply cords shall meet the requirements of IEC 60227 or IEC 60245.
 2) In accordance with the safety regulations, the power supply switch shall bring the identification of the relevant instrument and it should be easily accessible by the operator.

Programming example

Setting the display

The following example sets the display to indicate 4 mA = 0 tons and 20 mA = 60.0 tons.

After connecting the supply voltage, the display indicates a test value [1999].

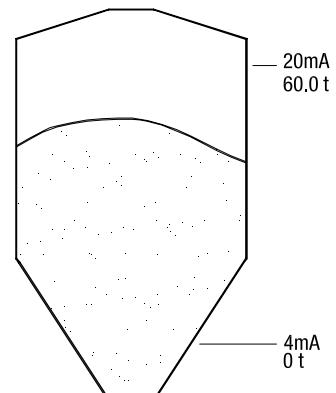

To configure the display, press the **[SET]-button** ca. 5 sec.

The display changes to the main menu with the first main menu item **[d.CnF]**.

Attend:

If the keys are not activated for ca. 20 sec, the device automatically switches back to the standard display "measure value".

| Main menu | Submenu | Description | Setting |
|--------------|---------|---|--|
| d.CnF | i.Typ | <ul style="list-style-type: none"> - Press arrow key ↓ - The first sub menu item [i.Typ] is indicated - Press and hold the [SET]-key, then select "4-20 mA" with the arrow key ↓ - After release of the [SET]-key, the setting is stored | 4-20 mA |
| U.oPt | d.Pnt | <ul style="list-style-type: none"> - Change to main menu with arrow key ↑, the main menu item [U.oPt] is indicated - Press arrow key ↓, the sub menu item [CAL.E.] is indicated - Search menu item [d.Pnt] with arrow key ↓ - Press and hold the [SET]-key, then set the decimal dot position with the arrow key ↑ to the first digit from right side - Indication is [000.0] - After release of the [SET]-key, the setting is stored | Decimal dot on first digit from right side 000.0 |
| U.oPt | L.SCL | <ul style="list-style-type: none"> - Change from sub menu item [d.Pnt] to sub menu item [L.SCL] with arrow key ↓ - Press and hold the [SET]-key, then set the lower scale value to 0 with arrow key ↓* - After release of the [SET]-key, the setting is stored | Lower scale value 0 tons at 4 mA |
| U.oPt | H.SCL | <ul style="list-style-type: none"> - Change from sub menu item [L.SCL] to sub menu item [H.SCL] with arrow key ↓ - Press and hold the [SET]-key, then set the upper scale value to 60.0 with arrow key ↓* - After release of the [SET]-key, the setting is stored - Wait 20 sec. until the indication changes to the measure value (indication is now depending on the actual current; if no current is present, the device indicates -15.0) - The programming is finished | Upper scale value 60.0 tons at 20 mA |

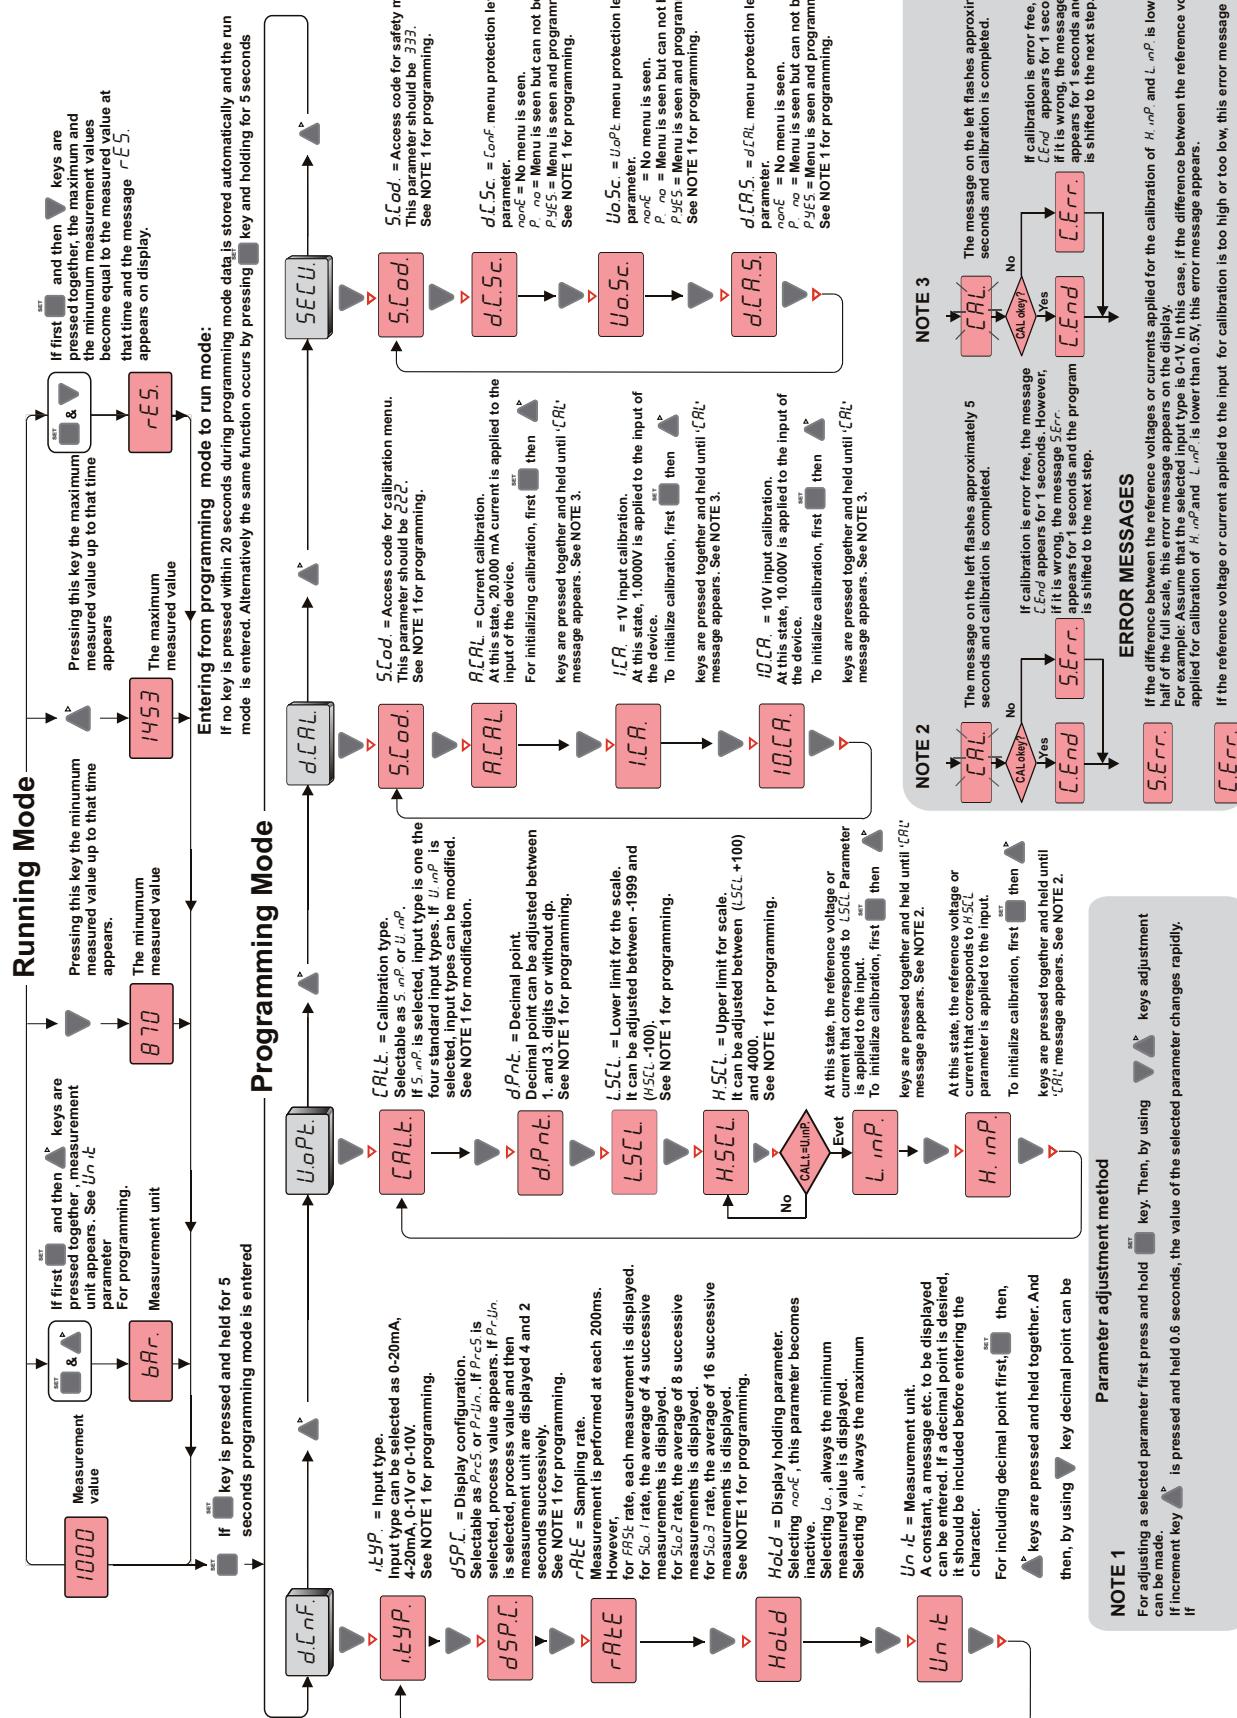

*Note: By pressing the arrow keys for a longer time, the speed of the value change increases.

The arrow key ↑ increases the value, the arrow key ↓ decreases the value.

Overview programming menu

NOTE 1

For adjusting a selected parameter first press and hold **[key]**. Then, by using **[key]** adjustment can be made.

ERROR MESSAGES

If the difference between the reference voltages or currents applied for the calibration of H_{-10^P} and L_{-10^P} is lower than one half of the full scale, this error message appears on the display.

For example: Assume that the selected input type is 0-1V. In this case, if the difference between the reference voltages applied for calibration of H_{-10^P} and L_{-10^P} is lower than 0.5V, this error message appears.

If the reference voltage or current applied to the input for calibration is too high or too low, this error message appears.

difference between the reference
